

Santa Fe Irrigation District

Meeting the water needs of Solana Beach, Rancho Santa Fe & Fairbanks Ranch

Fairbanks Ranch Valve Replacement Project

To ensure that your current and future water needs are met, the Santa Fe Irrigation District is poised to embark on a water valve maintenance program in Fairbanks Ranch. The project is part of our long-term mission to continually maintain and improve the water infrastructure for our customers.

Water Valve Replacement

Water valves are important because they help us isolate water pipe leaks by turning off the water as close to the leak as possible. When we can isolate a leak close to its source, we can also decrease the number of our customers who are inconvenienced by the temporary shut-off. New gate valves will be installed throughout the Fairbanks Ranch community.

How You Will Be Affected?

When the new valves are installed, temporary water shut-offs will be required in your neighborhood. Each scheduled shut-off will last approximately twelve hours, most likely between 8 a.m. and 8 p.m. Every effort will be made to maintain two-way traffic at all times.

When Will Construction Begin?

Construction on this project is slated to begin in mid-March and continue for approximately six months. The Santa Fe Irrigation District is currently coordinating with the contractor to develop a water shut-off schedule.

When Will You Be Contacted Next?

In early March, we will send you a copy of the water shut-off schedule and we will coordinate the water shut-offs with each home. We will also provide you with further informational resources about the project, including a 24-hour hot-line resource and the location of the most up-to-date water shut-off schedule.

Thank you for your patience and support during this important project.
